

I support XM satellite radio and it's ability to transmit local weather and traffic. I travel around the east coast and it comes in handy. XM provides products and services that are far superior to AM and FM with their canned garbage. I pay for the service and do not feel that anyone can tell me what I can receive or not receive. It all comes down to advertising dollars and not the end consumer. If AM and FM had quality programming I would listen to them, but they don't. It's a shame that a few large corporations tell the masses what they must listen to with their formatted music and commercials. Please REJECT the petition 04-160 and support XM radio.
